

LOFT INSULATION

An uninsulated loft can be a major source of heat loss for a UK home. Insulating a loft is one of the simplest steps you can take to save money on your energy bills and reduce carbon emissions.

What we will do

- Our team will insulate your loft using mineral wool to a total depth of 270mm. If some insulation is already present, we will top it up to ensure it reaches the minimum required depth of 270mm.
- Loft Hatch: We will insulate the back of your loft hatch and install draught-proofing where it is not already present.
- Additional Work: We will install tank jackets, pipe lagging, and downlight covers where required if they are not already present.
- Ventilation: If not already present, we will install trickle vents in habitable rooms and mechanical extraction fans to ensure adequate ventilation and reduce the risk of condensation or dampness.
- Boarded Lofts: If your loft is boarded, we will install insulation on top of the boards. Please note that we will not remove boards or re-board your loft.
- Professional Conduct: Our installers will be polite and courteous at all times, treating your home with respect and ensuring they clean up after themselves.

Duration and Guarantee

- Timeframe: The work typically takes between 1 and 4 hours to complete, depending on the size and complexity of your loft.
- Guarantee: The insulation comes with a 2-year insurance-backed guarantee, registered on the Trustmark Data Warehouse.

What We Need From You

- Be Available: Please ensure you are home at the time of the appointment and provide convenient access to our installers. If parking permits are required, kindly arrange them in advance.
- Clear the Loft: Ensure your loft is adequately cleared so our installers can access and insulate the entire space. This allows us to maximise the insulation coverage and keep your home warm.
- Special Requirements: Please communicate any special requirements or access issues to our office team in advance.
- Technical Monitoring: From time to time, technical monitoring is carried out on behalf of Trustmark to ensure industry standards are maintained. Please allow access for this if possible. We welcome independent checks for quality and consistency.
- Spread the Word: Help us reach more people by spreading the word about Carbon Rewind. We aim to help as many people as we can.
- Enjoy the Benefits: Sit back and enjoy the warmth and savings on your fuel bills, knowing that this work will reduce carbon emissions.
