

# ROOM-IN-ROOF INSULATION

Your loft rooms may have been built when insulation was not a major construction consideration, leading to significant heat loss through sloping ceilings, flat ceilings, and eaves storage areas. Room in Roof insulation can dramatically reduce heat loss, save money on energy bills, and reduce carbon emissions.

## What we will do

- Sloping Ceilings: Our team will insulate your sloping ceilings with insulated plasterboard, approximately 62.5mm deep.
- External Gable End Walls: We will insulate these walls with insulated plasterboard, approximately 62.5mm deep.
- Eaves Areas: We will insulate the eaves areas with mineral wool, using 100mm mineral wool for the stud walls and 270mm mineral wool for the floors. If we are unable to access the eaves then we will use insulated plasterboard, approximately 62.5mm deep.
- Flat Ceilings: We will insulate your flat ceilings from above with 270mm mineral wool. If this is not possible, we will insulate your ceilings with 62.5mm deep insulated plasterboard.
- Plastering: All insulated areas will be plastered and left ready for you to decorate.
- Post-Install Work: We will bring forward electric sockets and switches and refit your skirting boards.
- Ventilation: If not already present, we will install trickle vents in habitable rooms and mechanical extraction fans in wet rooms (kitchens/bathrooms) to ensure adequate ventilation and reduce the risk of condensation or dampness.
- Professional Conduct: Our installers will be polite and courteous at all times, treating your home with respect and ensuring they clean up after themselves.

## Duration and Guarantee

- Timeframe: The work typically takes between 3 and 5 days to complete, depending on the size and complexity of your loft rooms.
- Guarantee: The insulation comes with a 25-year insurance-backed guarantee, registered on the Trustmark Data Warehouse.

## What We Need From You

- Be Available: Please ensure you are home at the time of the appointment and provide convenient access to our installers. If parking permits are required, kindly arrange them in advance.
- Clear the Loft Rooms: Ensure your loft rooms are adequately cleared so our installers can access and insulate the surfaces.
- Special Requirements: Please communicate any special requirements or access issues to our office team in advance.
- Technical Monitoring: From time to time, technical monitoring is carried out on behalf of Trustmark to ensure industry standards are maintained. Please allow access for this if possible. We welcome independent checks for quality and consistency.
- Spread the Word: Help us reach more people by spreading the word about Carbon Rewind. We aim to assist as many people as we can.
- Enjoy the Benefits: Sit back and enjoy the warmth and savings on your fuel bills, knowing that this work will reduce carbon emissions.
